 163 2

### Search Topic

Please write a detailed statement of search topic. Describe specifically as possible the subject matter to be searched. Define any terms that may have a special meaning. Give examples or relevent citations, authors, keywords, etc., if known. For sequences, please attach a copy of the sequence. You may include a copy of the broadest and/or most relevent claim(s).

V (55-676 (72-701) V211-991 V409-991 V61-991 711-991 734-785

in for section would be well by the production of section by the production of section by the section of section by the sectio

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 20 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Smit, A.F.A. & Green, P. (1996-1997)

                                                                                                                                                                                                               This invention describes a coconut foliar decay virus (CFDV) DNA fragment that includes the stem-loop structure of CFDV DNA but lacks the translation start codons of open reading frames ORF1 and/Or ORF2. The new CFDV DNA fragment is useful as a bacterial or yeast promoter, as a promoter for tissue-specific (especially phloem-specific) gene expression in plants and for production of chimeric constructs for transient or stable expression. Certain fragments of CFDV DNA have stronger promoter

```
This invention describes a coconut foliar decay virus (CFDV) DNA fragment that includes the stem-loop structure of CFDV DNA but lacks the translation start codons of open reading frames ORF1 and/or ORF2. The new CFDV DNA fragment is useful as a bacterial or yeast promoter, as a promoter for tissue-specific (especially phloem-specific) gene expression in plants and for production of chimeric constructs for transient or stable expression. Certain fragments of CFDV DNA have stronger promoter activity in E. coli than the CaMV 35s promoter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δλ
                                                                                                                                                                                                                                           This invention describes a novel DNA sequence (I) that expresses products having the biological function of lipopeptide synthase. The invention also describes (I) recombinant expression vectors containing (I); (2) production and eukaryotic cells transformed or transfected with (I) or the vector of (2); (4) expression products (II) of (I), and synthetic proteins or peptides with the same sequences; (5) mono- or poly-clonal antibodies or peptides with the same sequences; (5) mono- or poly-clonal antibodies (Ab) specific for (II); (6) hybridoma cells that produce monoclonal Ab; and their crayments, are useful for expression of recombinant lipopeptide synthases, and as probes and primers for detection, isolation and milification of full-length cDNA sequences. (I) are used to produce transgenic plants. Lipopeptide synthases are useful for production of transgenic plants. Lipopeptide synthases are useful for production of antiviral, antibacterial or antifungal lipopeptides, particularly useful contains and or production of inopeptides synthases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;;

This invention relates to a method for identifying a nucleotide or polypeptide sequence that may be a drug target, or essential for growth or viability of an organism. Polynucleotide sequences AAH51947 - AAH52092
                                                                                                                                                                                                  cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be
                                                                                                                                                                              The invention relates to novel genes (AAH68727-AAH73383) associated with
                                                                            New isolated nucleic acid for diagnosing and treating cervical cancer and for assessing and detecting compounds for treating the cancer - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying nucleotide or polypeptide sequence for use as drug target, involves providing algorithm that analyzes a functional relationship between nucleotide or polypeptide sequences, and comparing the

```
represent DNA encoding proteins AAGB1096 - AAGB1241, Mycobacterium tuberculosis proteins which are potential drug targets. The DNA and protein sequences are used to illustrate the method of the invention. The method involves providing an unknown nucleotide or polypeptide sequences, and comparing it to a number of sequences along with at least one algorithm capable of analysing a functional relationship between nucleotide and polypeptide sequences. The method is useful for characterising the innotion of nucleic acids and polypeptides that may be useful as a target for a drug or essential for the growth or viability of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New secreted and membrane associated polypeptides for treating Alzheimer's disease, psoriasis, cancer, enterocolitis, sleep and sexual

The present sequence is a gene encoding numan suggraphores.

The present sequence is a gene encoding such polypeptides.

The invention relates to secreted and membrane associated polypeptides

The invention relates to secreted and membrane associated polypeptides

The invention are useful for treating diseases such as Alzheimer's disease,

and nucleic acid molecules encoding such polypeptides. Sequences of the

convertion are useful for treating diseases such as Alzheimer's disease,

amyotrophic lateral sclerosis (ALS), Zollinger-Ellison syndrome, diseases,

cof the immune system, heematopoletic disease, inflammation, anxiety,

schizophrenia, feeding disorders, anorexia, depression, social, sexual

con rewarded behaviour, cardiovascular disease, sleep disorder, learning

and memory alteration and altered immune response, setzure, migraine,

cancer, stroke, asthma, neuropathy, aging, sexual disorders, treatment

cof transsexuals, growth abnormalities, obesity, infections, autoimmune

cof transsexuals, growth abnormalities, obesity, infections, autoimmune

cof diseases (e.g. rheumatoid arthritis), cataractogenesis, angiogenesis,

diseases (e.g. rheumatoid arthritis), cataractogenesis, angiogenesis,

clischaemia, atherosclerosis, cirrhosis, Huntington's disease, headache,

crepair of acute and chronic mucosal lesion, lung carcinoma, cerebral

congestive heart failure, cardiac arrhythmias, hypercholesterolaemia,

congestive heart failure, cardiac arrhythmias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Amidase gene and modifying application of its expressed active products

```
obtain three rPAM gene fragments, then through technologies of point mutation and PCR recombination to splice rPAM holoenzyme gene and form its eucaryon expression plasmid so as to obtain the active expression in CHO cell. The obtained expression product can be directly used for amidation modification of polypeptide and protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                             The invention relates to a rat amidase gene, peptidylglycine alpha-amidating monooxygenase/PAM (EC1.14.17.3) and its active expression product in Chinese hamster ovary (CHO) cell. The invention uses in situ hybridization and a polymerase redin reaction (PCR) method to screen and obtain three rPAM gene fragments, then through technologies of point mutation and PCR recombination to splice rPAM holoenzyme gene and form its eucaryon expression plasmid so as to obtain the active expression in CHO cell. The obtained expression product can be directly used for amidation modification of polypeptide and protein. The present sequence is that of a polynucleotide of the PAM gene (AAI66138), useful to the

It can be used to amidate physiologically active peptides such as calcitonin and gastrin. It also amidates D-Tyr-Trp-Gly, Phe-Gly-Phe-Gly and Gly-Phe-Gly. The region from position 2 to 630 was used as a probe to isolate the C-terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New enzymes useful in peptide C-amidation - convert peptide C-terminal glycine to alpha hydroxy glycine then remove this leaving
                                                                                                                                    .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence hybridises, under stringent conditions, with a DNA sequence (I) which encodes an alpha amidating enzyme (AEE) and is foreign to the host cell into which it is transformed. (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        vector. The AEE encoded is used as a catalyst in the conversion of a peptidyl substrate to a corresp. peptidyl amide. This can be used for making a protein biologically active, e.g. calcitonin or growth hormone releasing factor. See also AAQ05638.
                                                                                                                                                                                                                                                                                                                                                        Sequence which hybrdises with DNA encoding alpha amidating enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  is connected to a promoter and is contained in an expression vector. The AEE encoded is used as a catalyst in the conversion

The CDNAs extracted could be divided into distinct types, the sequence below being of Type A. (Type B is given in AAQ10278). The sequence can be inserted into expression vectors for the prodn. of recombinant alpha-amidating anzyme (AE) useful for post translational modification of other recombinant polypeptides such as calcitonin. The sequence includes a membrane spanning comain which may be undesirable in a recombinant DNA expression system, possibly inactivating the enzyme. A stop codon can be placed upstream of the domain-encoding sequence, pref. between placed upstream of the domain-encoding sequence. This results in the consession of a 75 rather than 94 kD. The sequence of Type A and Type B are substantially identical with the exception of an intron region from bases 1178-1492 (CDS) of the Type B CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

AAS21244-AAS21518 encode for novel human secretory and transmembrane
PRO polypeptides. The PRO polypeptides are useful to detect other
PRO polypeptides, to link bloactive molecules to cells expressing
PRO polypeptides, to modulate biological activities of cells expressing
PRO polypeptides, and to detect the presence of mammalian lung, colon,
Dreast, prostate, rectal, cervical or liver tumours by comparing PRO
Dreast, prostate, rectal, cervical or liver tumours by comparing PRO
Some of the 275 sequences are also useful to stimulate the release of
tumour necrosis factor-alpha (TNF-alpha) from human blood, the
proliferation or differentiation of chondrocytes, the proliferation or
gene expression in pericyte cells, the release of proteoglycans from
cartilage, the proliferation of inner ear utricular supporting cells or
for 1-lymphocytes, the release of a cytokine from peripheral blood
monocytes (PBMCs), or the proliferation of endothelial cells. Some of
the PRO polypeptides may modulate glucose or free fatty acid uptake by
skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide
co factor VIIA. The PRO polypeptides can be used in assays to identify
molecules involved in binding interactions. The polynuclectides encoding
PRO polypeptides can be used to generate probes, antisense RNA/DNA,
transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gao W;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated, secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumours e.g.

Sequences AAS59506-AAS59804 represent DNA molecules encoding
Propionibacterium acnes immunogenic polypeptides. The proteins and their
Propionibacterium acnes immunogenic polypeptides. The proteins and the cassociated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and costeomyellitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and cused to downregulate expression and activity of P. acnes polypeptides and diagnostic agents for determining P. acnes presence, for example, by cance linked immunosorbent assay (ELISA). This sequence encodes the polypeptides shown in AAU42344-44248 and AAU67479.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                          RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human its sues disclosed in the specification. The nucleic acids, proteins, antibodies and (anti)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and cher cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune tract, liver, lung, or urogenital; (b) immune anemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple scierosis, rhemmatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as mycoradial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 2; SEQ ID NO 2713; 781pp + Sequence Listing; English.
